## Press Release August 2008

### Suppliers Agreement between Yanmar and Mastervolt

Mastervolt International and Yanmar Marine International signed an agreement where Mastervolt is to supply all second alternator sets for Yanmar engines in Europe.

Second alternator sets are assembled on the Yanmar engines at the Marine Headquarter of Yanmar in Almere Holland. Yanmar stated: "after testing numerous different alternator sets, the only one performing up to, and over, specifications was the Mastervolt 12/130 and the Mastervolt 24/75 alternator.

It is ideal for our customers who need more electrical power, for example to charge heavy battery sets, without the need of additional battery chargers". As they continued, "remarkably the most effort went into the development of the mounting bracket; a key part of the system, that ensures reliable and durable in-line operation."

Mastervolt says: "we are delighted that one of the biggest global marine engine manufacturers selected Mastervolt for such an important component of their core product."

Headquartered in Almere in the Netherlands, Yanmar Marine International was established in 2002 and is a subsidiary of the Yanmar Company Ltd of Japan. The company sells diesel engines from 9mhp-900mhp, as well as drive systems and accessories. It also has regional headquarters in the US and South East Asia.
