Press Release October 2007

Winnebago Increase Production with Two New Models

Winnebago Industries Australia has been building motorhomes since 1965 and is growing from strength to strength. With Mastervolt being the OEM supplier of battery chargers, monitors and inverter/chargers now for many years we are seeing a significant surge in production with a new motorhome being built every 4 hours. With two new vehicles introduced this year the sophisticated and elegant "Nullarbor" and the spacious and luxurious "Birdsville", they now manufacture seven model ranges encompassing A, B and C class motorhomes.

Winnebago Industries are widely regarded as the elite motorhome manufacture and Mastervolt Australia are proud to have a long association with the largest motorhome builder in the country.
